

The following DSP preset have been created for the K-DSP platform for being used with some of the NEXO® loudspeaker systems. The tonal balance of the loudspeaker and the relative phase response have been carefully optimized in order to match as close as possible the original tonal balance and to preserve the native sound character of the systems. All presets are designed for long throw systems.

Also the phase response at the lowest frequency band has been optimized in order to perform the native interaction with the relative subwoofers.

The K-DSP dual limiter carefully takes under control the output power protecting the loudspeakers both from thermal over-powering and mechanical over-excursion.

The sound reproduction balance together with some of the most relevant advantages of Powersoft amplifiers give to these NEXO® system very good dynamic performances and improved reliability and protection.

NEXO® is a trademark of Nexo

Preset Name	Description
RS18_OMNI 90 - vIL	Omni-directional preset for Nexo RS18 subwoofer with 90 Hz Low Pass Filter. (Ch1 Sub + Ch2 Sub)
